

CADENCE is a lightweight, space-saving fetal monitor. The external and internal monitoring parameters ensure it can be used up to and during the second stage labor. It also can be connected to the obstetrical central station to construct central monitoring system.

CADENCE Fetal Monitor

Features

- Lightweight, space-saving, easy operation either lying on the table or hanging on the wall
- Nine wafers side band impulse probe: detect accurately, reduce false signal, accurate and continuous perfect FHR traces
- Basic functions: FHR, TOCO, fetal movement, twins monitoring and automatic channel recognition
- Directly ECG and IUP monitoring (Cadence Pro)
- Build-in Obstetrical Central Station network interface
- Insight[®] software for data recording, analysing and displaying on a standard PC
- Wide range of applying voltage (100~250V), adapted to all regions
- High performance/cost ratio
